

## ACTIVATED CARBON

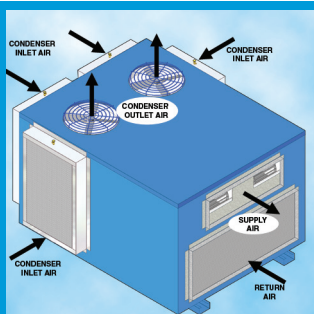

**Cam-Sorb** Filters are available with plain and specially treated activated carbon for the removal of a wide range of odours and compounds. The "V-Bank" design of this filter makes it ideal for installation in both new and retrofit applications.

**Polyorb** activated carbon media is a non woven polyester based material impregnated with carbon. This media is ideal for flat pad and bag applications.

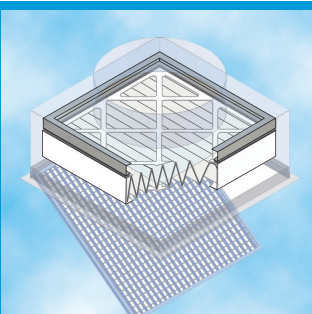

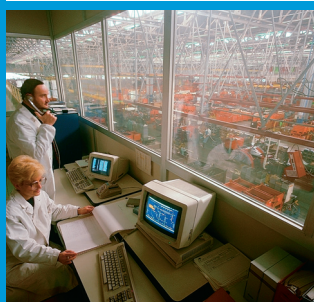

## PORTABLE AIR CONDITIONING

Our range of portable air conditioning units are available for rental or sale. There is a single phase 4.5 kW unit and a three phase 10 kW. Both units are portable. These units are useful for emergency break downs, under capacity computer rooms and temporary situations where additional cooling is required.

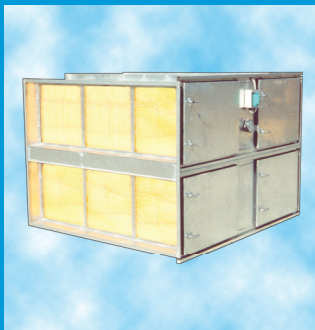

## EVAPORATIVE PRE-COOLER

The **Cool-Pak** Pre-Cooler uses the evaporative cooling principle to reduce the inlet air temperature to an air cooled condensing coil. The reduction in the dry bulb temperature of the air removes heat from the refrigerant thus increasing capacity and decreasing running cost.

## CLEAN-FLOW

The **Clean-Flow** air filter system offers an easy to install and maintain system in common return air egg crate plenums. There is a choice of the revolutionary new **magnetic seal** or the traditional clips. The high removal rate of **airborne pollutants** reduces exposure to Pollens, Dust, Fungus, Mould and a wide range of other airborne pollution

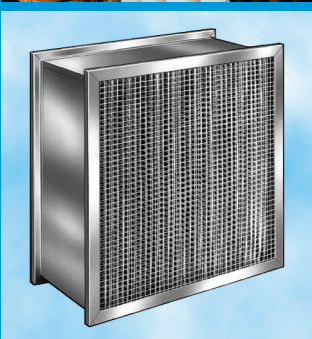

## KITCHEN EXHAUST SYSTEM

The **Odor-Gard** and **Grease-Gard** units enable kitchen exhaust to be installed where normal ventilation is not possible. Cross contamination of kitchen exhaust discharge and adjacent air conditioning air intakes can be minimized. The multi stage treatment of the kitchen exhaust air enables the various contaminants to be removed by the most appropriate method.

## SMOKE-GARD AIR PURIFIER

The **Smoke-Gard** air purifier range reduces tobacco smoke, body odour, fumes, bacteria, dust and other pollutants from the air. The unit combines a high efficiency smoke removing cartridge and proven odour reducing activated carbon. The Smoke-Gard unit is available in a range of self contained or ducted **in ceiling** models and the **under ceiling** model.

## GAS TURBINE FILTERS

Air Care Australia has complete range of replacement cartridges for all the major dust collector manufacturers as well as the barrier cartridges for the major gas turbine manufacturers. So, whether you're in the power generating, welding, powder coating, or pharmaceutical manufacturing business, we have the cartridge for you.

## CUSTOM ENGINEERED EQUIPMENT

Air Care Australia can custom engineer an air purification unit to provide clean air for control rooms, computer rooms, switchrooms and any other application that requires clean air. We can remove particulate and gases from contaminated exhaust or supply air. Units can be constructed from galvabond zinc coated steel or corrosive resistant stainless steel.
